### LEE LINEAR® Offers Custom Machined Precision Rolled Ball Screws

Piscataway, New Jersey -- LEE LINEAR®, a manufacturer of world-class linear motion components, now provides fast turnaround of high quality end-machined precision rolled ball screws. Customers will appreciate LEE LINEAR® ball screws because of the consistent predictability, high load capacities, broad range of sizes and leads, and rapid custom end machining.

LEE's Vice President, Jim Ashworth explains, "LEE's rolled ball screws are the finest on the market. Our ball screws maintain their accuracy and quality while remaining cost effective. Even at high speeds, they offer quiet and smooth operation."

Made from induction case hardened alloy steel, LEE LINEAR® ball screws are integrally sealed, operate at over 92 percent efficiency, and are available in both inch and metric configurations. These products exhibit long life, smooth motion, and high accuracy ideal for close tolerance work. To effectively reduce backlash, LEE LINEAR® ball screws and ball nuts are precision manufactured to match and are available in regular, high-lead and miniature flange types.

"Selecting the correct ball screw may be challenging," said Mr. Ashworth. "Our customers can rely on their LEE representative to work with them to determine the ball screw, nut type, thread length, and total length which is best suited for the application."

LEE LINEAR® is a U.S. manufacturer of precision linear motion components, including LEE LINEAR® Roller Bearing Pillow Blocks, Precision Linear Ball and Composite Bearings and Pillow Blocks, **60 Plus®**, C1060, and 440C Stainless Steel Precision Case Hardened Shafting, Pre-Drilled and Tapped Shafting, Pre-Drilled Shaft Supports, Slide Tables and Systems. The company also offers such accessory items as Carriage Locks, Carriage Plates, Ball Screws, and more!

In addition to the quality products noted above, LEE LINEAR® offers Profile Linear Guides, Precision Machined Rolled Ball Screws, Custom Machined Ball Screws, Cross Roller Guides, Cross Roller Tables, and Support Units.
